* **Fabrication Shop**- Cutting, Drilling, Welding, Grinding, Straightening, End Milling, Material Handling Equipment (Cranes/Hoists)

1. CNC cutting Machine – (2 Nos)

A **CNC Cutting Machine** is an advanced machine used in fabrication units to cut metal plates, pipes, and structural components with high accuracy using computer-controlled programs.

The CNC Cutting Machine is used for precise cutting of MS plates and structural steel components. It operates through computer-controlled programming, ensuring accurate dimensions and smooth cutting edges. The machine can easily create complex shapes and profiles as per approved drawings.

It helps reduce material wastage, improves productivity, and maintains consistent quality. This makes it an essential machine in bridge and structural fabrication work.

2. Pug Cutting Machine – (7 Nos)

Pug-Cutting Machine - "A PUG cutting machine is an automatic metal-cutting machine that helps cut steel plates quickly, neatly, and accurately."

It is used for precise flame cutting of MS plates and structural steel components. It enables accurate straight-line and profile cutting of plates as per fabrication drawings and project requirements. The machine improves productivity by delivering consistent cutting quality with minimal material wastage. It is widely used in the fabrication of girders, stiffeners, gusset plates, and other structural components.

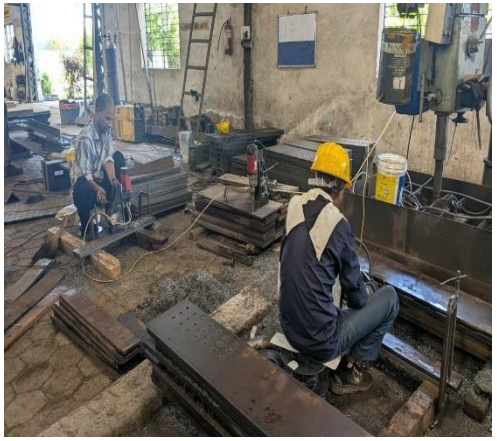

3. CNC Drilling Machine – (1 Nos)

A **CNC Drilling Machine** is a computer-controlled machine used to make holes in metal plates, beams, and other steel components with high accuracy.

The **CNC Drilling Machine** is used for accurate drilling of holes in MS plates, girders, and structural steel components. It operates through computer-controlled programming, ensuring precise hole positioning and consistent quality. The machine can drill multiple holes quickly as per approved drawings and design requirements. It reduces manual effort, improves productivity, and minimizes errors. This makes it an essential machine for bridge and structural fabrication work.

4. Radial Drilling Machine – (1 Nos)

A **Radial Drilling Machine** is a type of drilling machine in which the drill head is mounted on a movable arm (**called a radial arm**) that can rotate around a vertical column. This arrangement allows holes to be drilled at different positions on a **large workpiece without moving the workpiece itself**. It is Suitable for components requiring flexibility in **drilling positions and handling large structural sections**.

In simple words a **Radial Drilling Machine** is a drilling machine with a movable arm that allows holes to be **drilled** at different locations on **large metal components easily and accurately**.

5. MIG Welding Machines - (17 Nos)

A **MIG welding machine** is a welding device used in **MIG welding (Metal Inert Gas welding)**, also known as **Gas Metal Arc Welding (GMAW)**. It joins metal pieces by creating an electric arc between a continuously fed wire electrode and the workpiece, melting both and forming a strong weld.

A **MIG welding machine** is used to join metal parts by creating an electric arc between a continuously fed wire electrode and the metal surface. It uses a shielding gas to protect the weld from contamination. MIG welding is fast, easy to learn, and produces clean, strong welds. It is widely used in automobile repair, metal fabrication, construction, and manufacturing industries.

6. SAW Welding Machines – (Submerged Arc Welding) (4 Nos)

A **SAW machine** is a welding process where the arc is covered by a layer of flux, which protects the weld and ensures strong, clean joints. It is widely used in heavy structural welds, particularly in girders and long seam welding & fabrication work due to its high deposition rate and deep penetration, ensuring strength and durability of welded joints.

This process provides **strong, deep, and high-quality welds** with very little spatter and no arc exposure since it is covered by flux. It also offers **high welding speed, better efficiency, and consistent results**, making it ideal for heavy fabrication work like beams, tanks, and structural components.

7. H-Beam Welding Machine – (1 Nos)

An **H-Beam welding machine** is a machine used to join steel plates and form them into an H-shaped beam using automatic welding, mainly for structural fabrication work. It is used in structural fabrication to assemble and weld steel plates into an H-shaped beam (also called an I-beam).

In fabrication work, it is mainly used for making **building structures, bridges, industrial sheds, and heavy steel frameworks**. It provides **strong, accurate, and uniform welds with high productivity and reduced manual effort**.

8. Blasting Shop - A **Blasting Shop** is a specialized surface preparation area in fabrication industries where steel components are cleaned using high-pressure abrasive blasting with grit or steel shot to remove rust, mill scale, oil, grease, and other surface impurities.

This process creates a uniformly **roughened and chemically clean surface**, which significantly enhances the bonding strength of protective coatings such as paint, epoxy, or metallizing. It plays a crucial role in ensuring high-quality surface **finishing, improving corrosion resistance, and extending** the service life of fabricated structures like steel beams, pressure vessels, pipelines, and industrial frameworks.

It provides a **clean, roughened surface for better paint adhesion, improved corrosion resistance, and longer life of fabricated components**.

9. Metallizing Shop - A **Metallizing Shop** is a specialized facility where steel surfaces are protected from corrosion using thermal spray coating processes like zinc or aluminium metallizing. Molten metal is sprayed onto cleaned steel to form a strong, durable protective layer. This process improves resistance to rust, moisture, and harsh environmental conditions.

It is widely used in fabrication work for **steel bridges, pipelines, industrial structures, and heavy components**, ensuring long-lasting protection and extended service life.

10. Painting Shop - A **Painting Shop** is a controlled surface finishing facility in fabrication industries where steel components are coated with primer, intermediate, and finish paint layers as per project specifications. The process is carried out in a controlled environment to ensure proper adhesion and uniform coating thickness.

It provides a **smooth, high-quality finish** that enhances both appearance and protection. This shop plays a key role in preventing **corrosion** and **extending** the service life of fabricated structures like **steel bridges, buildings, and industrial components**.

11. Assembly Area - An **Assembly Area** is a designated space in fabrication industries where fabricated steel components are temporarily fitted and assembled to check their **alignment, dimensions, and overall geometry before final dispatch**. It ensures proper bolt hole matching, fit-up accuracy, and structural correctness as per design drawings. This process helps identify and correct any errors in advance, reducing on-site erection issues.

It plays a vital role in ensuring **smooth installation, improved quality control, and efficient project execution** for structures like bridges, buildings, and industrial frameworks.

12. Stacking Area - A **Stacking Area** is a well-organized storage zone in fabrication industries used for safe stacking of finished and semi-finished steel components. Materials are arranged systematically to prevent damage, distortion, or mixing of parts.

It ensures proper identification and traceability of components throughout the production process. This area also facilitates easy **handling, loading, and transportation of fabricated structures** like **beams, frames, and other steel assemblies**.

13. Overhead Lifting Cranes – (6 Nos)

Overhead Lifting Cranes are heavy-duty material handling systems installed in fabrication and assembly areas for safe, precise, and efficient movement of **steel plates, girders, and fabricated components**. These cranes enable smooth transfer of materials between cutting, welding, assembly, blasting, and stacking zones, ensuring uninterrupted workflow.

They significantly reduce **manual handling, improve productivity, and enhance workplace safety** by minimizing lifting risks. Widely used in fabrication plants, they support faster operations and efficient handling of heavy structural steel elements.

14. Farana crane – (5 Nos)

A **Farana crane** is a powerful mobile lifting equipment widely used in fabrication and construction sites for handling heavy, bulky, and long structural steel members with precision and safety. It is ideally suited for critical operations such as **assembly, stacking, loading, and erection** of large components where flexibility and reach are required.

With its strong lifting capacity and versatile movement, it ensures smooth and efficient handling of oversized materials, reduces manual effort, and significantly enhances **productivity, safety, and overall operational efficiency** in fabrication and structural erection works.

15. POT PTFE Bearing – **A POT PTFE bearing** is a steel plate placed between the **girder and the bridge support** (pier or abutment). It is used during girder launching and final erection to safely transfer the load of the girder to the structure below. The **bearing distributes the load** evenly and prevents excessive stress on the **concrete surface**. It helps maintain proper alignment of the girder during installation.

In some cases, it also allows small movements caused by temperature changes, shrinkage, or loading. Bearing improve the stability and safety of the bridge structure. They **reduce the risk of cracking** or damage at support points. Therefore, bearing are an essential component in bridge girder **fabrication and launching** operations.

16. Hydraulic Jack Machine – (1 Nos)

A **hydraulic jack machine** is a tool used to lift heavy loads by using hydraulic oil pressure. It works on the principle of **Pascal's Law**. The machine can lift very **heavy objects with little effort**. In a fabrication unit, it is used to **lift steel parts and heavy structures**.

It helps in **aligning and positioning** components during assembly. **Hydraulic jacks** are also used during welding and maintenance work. They improve safety for workers and reduce manual effort. This machine increases productivity and makes fabrication work easier and more efficient.

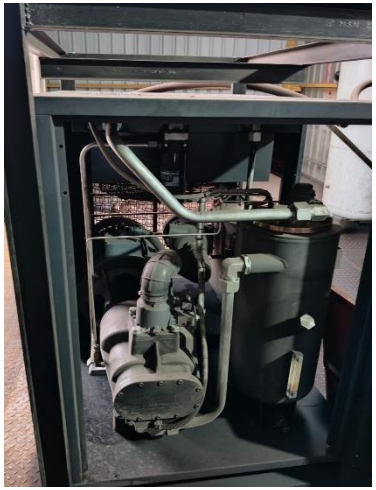

17. Compressor Machine – (2 Nos)

A **compressor** is a machine that compresses air and stores it at high pressure. It is widely used in fabrication workshops to supply compressed air for various tasks. It operates pneumatic tools such as drills, grinders, and impact wrenches.

Compressors are also used for spray painting and cleaning dust or metal chips from workpieces. They help improve efficiency and productivity in fabrication work. They help make work faster, easier, and more efficient.

Compressors are essential for many fabrication and manufacturing processes. They are also used for cleaning, painting, and welding applications.

18. Face Milling Machine – (1 Nos)

A Milling Machine which we developed as per our requirement for Milling of I beam face for Matching of girder Face

Which is very useful for face milling of I beam... Angle, channels also... It reduces Manual Girding work and costing of Grinding is very less for us.

19. Straightening Machine – (1 Nos)

A straightening machine Machine which we developed as per our requirement for for straigtineing of MSPlates , Angles, Channels and all structureal steels Which is very useful for us.

20.Roughness Tester	Facilities including details of Surface Roughness Tester TR-200+

Subject: Grant of License for Quality Management Systems Certification as per IS/ISO 9001:2015 License No. CRO/QMS/L- 8004593

Dear Sir,

With reference to your application, we are pleased to inform you that BIS has granted Quality Management Systems Certification as per IS/ISO 9001:2015 to your organization Office of the M/s Saturn Prefab India Pvt Ltd, Plot no.727-728, Sector-3, Pithampur, Madhya Pradesh – 454774 with License No. CRO/QMS/L-8004593. The license number should invariably be referred to in all your future correspondence. The scope of the license is as follows:

Manufacturing, fabrication & supply of various types of Steel bridge girders and POT PTFE Bearings. This scope excludes Clause 8.3 Design & Development of Product and Services.

2. The licence has been made operative from 02nd September 2026 to 01st September 2029 and is renewable under BIS Act 2016 and the applicable Rules and Regulations. The license is recertified subject to the following conditions that the organization:

a) Shall meet, all the requirements on a continuous basis and facilitate the surveillance by BIS, when required to verify continued compliance;

b) Shall make use of the certificate, standard mark, and statements claiming certifications in accordance with rules and instructions from BIS;

c) Shall pay the fees, due to BIS, promptly for the licensing services and for the use of the standard mark

d) Shall operate and maintain procedure for handling and recording any complaints and shall report complaints against the management systems operated under this license to BIS and cooperate fully with BIS in the investigation and the resolution of such complaints.

3. An amount of Rs. 43,660/- (GST NEFT, Dated 29.06.2026) has been received towards audit and license fees. The charges for subsequent surveillance audits will be additional and intimated when scheduled. The license fee for subsequent re-certification is to be paid in advance before renewal audit. The licensee fee once paid shall not be refunded even if the license is temporarily discontinued by the licensee or BIS before the expiry of license.

4. The license is recertified under Bureau of Indian Standards (Conformity Assessment) Regulations, 2018, particularly the Regulation 6, which specifies the licensee's obligations. The rights and privileges under the license shall not be exercised for any other product/services/process/ which are not covered by the License.

5. You are requested to intimate the undersigned about any changes in your Management System or Manual. Verification of the same would be undertaken subsequently during the next surveillance/special visit/renewal audit, if required.

6. License Document is enclosed herewith.

Thanking you,

Yours faithfully,

(Pradeep Singh Shekhawat)

2. Scope of Testing

Ohm Inspection & Engineers Pvt. Ltd. shall conduct the following Non-Destructive Testing (NDT) services as per the requirements of **Saturn Prefab India Pvt. Limited.**:

Ultrasonic Testing (UT)

Liquid Penetrant Testing (LPT / PT)

Magnetic Particle Testing (MPT / MT)

Radiography Testing (RT)

All tests shall be carried out on metallic samples/products supplied by **Saturn Prefab India Pvt. Limited.**

---

3. Supply of Test Specimens

All required test specimens, samples, or products for testing shall be provided by **Saturn Prefab India Pvt. Limited.** to the testing agency.

---

4. Testing Personnel

All testing activities including Ultrasonic Testing, Liquid Penetrant Testing, Magnetic Particle Testing, and Radiography Testing shall be performed by qualified and certified personnel.

The testing personnel shall hold minimum NDT Level II certification in the respective testing methods.

5. Testing Charges

All testing charges for samples/products shall be borne by **Saturn Prefab India Pvt. Limited.** as per mutually agreed rates between both parties.

6. Validity of MOU

This MOU shall remain valid for a period of **Six (6) years**, commencing from **01/03/2026** and ending on **29/02/2032**, unless extended or terminated by mutual consent of the Parties in writing.

NABL Approvals	**Mandatory approvals- NABL, WRI Trainings**		

National Accreditation Board for Testing and Calibration Laboratories

NABL

CERTIFICATE OF ACCREDITATION

METALAB ANALYTICAL PRIVATE LIMITED

has been assessed and accredited in accordance with the standard

ISO/IEC 17025:2017

"General Requirements for the Competence of Testing & Calibration Laboratories"

for its facilities at

25-26, 28 & 31, NILKANTH AVENUE, VIRATNAGAR CROSS, S. P. RING ROAD, ODHAV, AHMEDABAD, GUJARAT, INDIA

in the field of

TESTING

Certificate Number: NABLT0626GJ18339 (In lieu of TC-6123)

Issue Date: 06/06/2026 Valid Until: 05/06/2030

This certificate remains valid for the Scope of Accreditation as specified in the annexure subject to continued satisfactory compliance to the above standard & the relevant requirements of NABL.

(To see the scope of accreditation of this laboratory, you may also visit NABL website www.nabl-india.org)
