* **Fabrication Shop-** Cutting, Drilling, Welding, Grinding, Straightening, End Milling, Material Handling Equipment (Cranes/Hoists)

1. CNC cutting Machine – (2 Nos)

A **CNC Cutting Machine** is an advanced machine used in fabrication units to cut metal plates, pipes, and structural components with high accuracy using computer-controlled programs.

The CNC Cutting Machine is used for precise cutting of MS plates and structural steel components. It operates through computer-controlled programming, ensuring accurate dimensions and smooth cutting edges. The machine can easily create complex shapes and profiles as per approved drawings.

It helps reduce material wastage, improves productivity, and maintains consistent quality. This makes it an essential machine in bridge and structural fabrication work.

2. Pug Cutting Machine – (7 Nos)

Pug-Cutting Machine - "A PUG cutting machine is an automatic metal-cutting machine that helps cut steel plates quickly, neatly, and accurately."

It is used for precise flame cutting of MS plates and structural steel components. It enables accurate straight-line and profile cutting of plates as per fabrication drawings and project requirements. The machine improves productivity by delivering consistent cutting quality with minimal material wastage. It is widely used in the fabrication of girders, stiffeners, gusset plates, and other structural components.

3. CNC Drilling Machine – (1 Nos)

A **CNC Drilling Machine** is a computer-controlled machine used to make holes in metal plates, beams, and other steel components with high accuracy.

The **CNC Drilling Machine** is used for accurate drilling of holes in MS plates, girders, and structural steel components. It operates through computer-controlled programming, ensuring precise hole positioning and consistent quality. The machine can drill multiple holes quickly as per approved drawings and design requirements. It reduces manual effort, improves productivity, and minimizes errors. This makes it an essential machine for bridge and structural fabrication work.

4. Radial Drilling Machine – (1 Nos)

A **Radial Drilling Machine** is a type of drilling machine in which the drill head is mounted on a movable arm (called a **radial arm**) that can rotate around a vertical column. This arrangement allows holes to be drilled at different positions on a **large workpiece without moving the workpiece itself**. It is suitable for components requiring flexibility in **drilling positions and handling large structural sections**.

In simple words a **Radial Drilling Machine** is a drilling machine with a movable arm that allows holes to be **drilled** at different locations on **large metal components easily and accurately**.

5. MIG Welding Machines - (17 Nos)

A **MIG welding machine** is a welding device used in **MIG welding (Metal Inert Gas welding)**, also known as **Gas Metal Arc Welding (GMAW)**. It joins metal pieces by creating an electric arc between a continuously fed wire electrode and the workpiece, melting both and forming a strong weld.

A **MIG welding machine** is used to join metal parts by creating an electric arc between a continuously fed wire electrode and the metal surface. It uses a shielding gas to protect the weld from contamination. MIG welding is fast, easy to learn, and produces clean, strong welds. It is widely used in automobile repair, metal fabrication, construction, and manufacturing industries.

6. SAW Welding Machines – (Submerged Arc Welding) (4 Nos)

A **SAW machine** is a welding process where the arc is covered by a layer of flux, which protects the weld and ensures strong, clean joints. It is widely used in heavy structural welds, particularly in girders and long seam welding & fabrication work due to its high deposition rate and deep penetration, ensuring strength and durability of welded joints.

This process provides **strong, deep, and high-quality welds** with very little spatter and no arc exposure since it is covered by flux. It also offers **high welding speed, better efficiency, and consistent results**, making it ideal for heavy fabrication work like beams, tanks, and structural components.

7. H-Beam Welding Machine – (1 Nos)

An **H-Beam welding machine** is a machine used to join steel plates and form them into an H-shaped beam using automatic welding, mainly for structural fabrication work. It is used in structural fabrication to assemble and weld steel plates into an H-shaped beam (also called an I-beam).

In fabrication work, it is mainly used for making **building structures, bridges, industrial sheds, and heavy steel frameworks**. It provides **strong, accurate, and uniform welds with high productivity and reduced manual effort**.

8. Blasting Shop - A **Blasting Shop** is a specialized surface preparation area in fabrication industries where steel components are cleaned using high-pressure abrasive blasting with grit or steel shot to remove rust, mill scale, oil, grease, and other surface impurities.

This process creates a uniformly **roughened and chemically clean surface**, which significantly enhances the bonding strength of protective coatings such as paint, epoxy, or metallizing. It plays a crucial role in ensuring high-quality surface **finishing, improving corrosion resistance, and extending** the service life of fabricated structures like steel beams, pressure vessels, pipelines, and industrial frameworks.

It provides a **clean, roughened surface for better paint adhesion, improved corrosion resistance, and longer life of fabricated components.**

9. Metallizing Shop - A **Metallizing Shop** is a specialized facility where steel surfaces are protected from corrosion using thermal spray coating processes like zinc or aluminium metallizing. Molten metal is sprayed onto cleaned steel to form a strong, durable protective layer. This process improves resistance to rust, moisture, and harsh environmental conditions.

It is widely used in fabrication work for **steel bridges, pipelines, industrial structures, and heavy components**, ensuring long-lasting protection and extended service life.

10. Painting Shop - A **Painting Shop** is a controlled surface finishing facility in fabrication industries where steel components are coated with primer, intermediate, and finish paint layers as per project specifications. The process is carried out in a controlled environment to ensure proper adhesion and uniform coating thickness.

It provides a **smooth, high-quality finish** that enhances both appearance and protection. This shop plays a key role in preventing **corrosion** and **extending** the service life of fabricated structures like **steel bridges, buildings, and industrial components**.

11. Assembly Area - An **Assembly Area** is a designated space in fabrication industries where fabricated steel components are temporarily fitted and assembled to check their **alignment, dimensions, and overall geometry before final dispatch**. It ensures proper bolt hole matching, fit-up accuracy, and structural correctness as per design drawings. This process helps identify and correct any errors in advance, reducing on-site erection issues.

It plays a vital role in ensuring **smooth installation, improved quality control, and efficient project execution** for structures like bridges, buildings, and industrial frameworks.

12. Stacking Area - A **Stacking Area** is a well-organized storage zone in fabrication industries used for safe stacking of finished and semi-finished steel components. Materials are arranged systematically to prevent damage, distortion, or mixing of parts.

It ensures proper identification and traceability of components throughout the production process. This area also facilitates easy **handling, loading, and transportation of fabricated structures like beams, frames, and other steel assemblies.**

13. Overhead Lifting Cranes – (6 Nos)

Overhead Lifting Cranes are heavy-duty material handling systems installed in fabrication and assembly areas for safe, precise, and efficient movement of **steel plates, girders, and fabricated components**. These cranes enable smooth transfer of materials between cutting, welding, assembly, blasting, and stacking zones, ensuring uninterrupted workflow.

They significantly reduce **manual handling, improve productivity, and enhance workplace safety** by minimizing lifting risks. Widely used in fabrication plants, they support faster operations and efficient handling of heavy structural steel elements.

14. Farana crane – (5 Nos)

A **Farana crane** is a powerful mobile lifting equipment widely used in fabrication and construction sites for handling heavy, bulky, and long structural steel members with precision and safety. It is ideally suited for critical operations such as **assembly, stacking, loading, and erection** of large components where flexibility and reach are required.

With its strong lifting capacity and versatile movement, it ensures smooth and efficient handling of oversized materials, reduces manual effort, and significantly enhances **productivity, safety, and overall operational efficiency** in fabrication and structural erection works.

15. POT PTFE Bearing – A **POT PTFE bearing** is a steel plate placed between the **girder and the bridge support** (pier or abutment). It is used during girder launching and final erection to safely transfer the load of the girder to the structure below. The **bearing distributes the load** evenly and prevents excessive stress on the **concrete surface**. It helps maintain proper alignment of the girder during installation.

In some cases, it also allows small movements caused by temperature changes, shrinkage, or loading. Bearing improve the stability and safety of the bridge structure. They **reduce the risk of cracking** or damage at support points. Therefore, bearing are an essential component in bridge girder **fabrication and launching** operations.

16. Hydraulic Jack Machine – (1 Nos)

A **hydraulic jack machine** is a tool used to lift heavy loads by using hydraulic oil pressure. It works on the principle of **Pascal's Law**. The machine can lift very **heavy objects with little effort**. In a fabrication unit, it is used to **lift steel parts and heavy structures**.

It helps in **aligning and positioning** components during assembly. **Hydraulic jacks** are also used during welding and maintenance work. They improve safety for workers and reduce manual effort. This machine increases productivity and makes fabrication work easier and more efficient.

17. Compressor Machine – (2 Nos)

A **compressor** is a machine that compresses air and stores it at high pressure. It is widely used in fabrication workshops to supply compressed air for various tasks. It operates pneumatic tools such as drills, grinders, and impact wrenches.

Compressors are also used for spray painting and cleaning dust or metal chips from workpieces. They help improve efficiency and productivity in fabrication work. They help make work faster, easier, and more efficient.

Compressors are essential for many fabrication and manufacturing processes. They are also used for cleaning, painting, and welding applications.

Based on Quality Audit of the infrastructure, T&P and other facilities installed at your work address at Plot No. 727-728, Sector-3, Pithampur, Distt—Dhar, Indore-454775 (MP) , your firm registration is hereby continued in the approved list of RDSO for fabrication of Open Web, Composite Girder and Other Steel Plate Girders Part A for years up to 30.03.2025. 2. Any change in the address of your office or manufacturing units shall be brought to the notice of Director General/B&S, RDSO, Lucknow. You are liable to be dropped from the approved list if your product is found unsatisfactory at any stage of fabrication and inspection or on any other violation as mentioned in ISO documents. 3. This continuation in the approved list of RDSO will be valid for a period of five years i.e. 31.03.2029. Next quality audit shall be initiated as per extant RDSO ISO guidelines. 4. The further continuation in the approved list of RDSO will be subject to Quality Audit which generally will be conducted after three years from the previous quality audit. However, if special condition warrants, Quality Audit may be conducted earlier also. 5. It is the responsibility of the firm to facilitate the RDSO Team for conducting Quality Audit as & when required. Please acknowledge receipt of the letter. Ohm Inspection & Engineers Pvt. Ltd.

(Non-Destructive Testing Laboratory)

Address:

Survey No. 184, Palky-2, Plot No. 2, Shree Ram Industrial Park – 2,
Bhavnagar, Gujarat.

1. Purpose of Agreement

This Memorandum of Understanding outlines the arrangement under which Ohm Inspection & Engineers Pvt. Ltd. will carry out Non-Destructive Testing (NDT) of samples/products provided by Saturn Prefab India Pvt. Limited.

2. Scope of Testing

Ohm Inspection & Engineers Pvt. Ltd. shall conduct the following Non-Destructive Testing (NDT) services as per the requirements of Saturn Prefab India Pvt. Limited.:

Ultrasonic Testing (UT)

Liquid Penetrant Testing (LPT / PT)

Magnetic Particle Testing (MPT / MT)

Radiography Testing (RT)

All tests shall be carried out on metallic samples/products supplied by Saturn Prefab India Pvt. Limited.

3. Supply of Test Specimens

All required test specimens, samples, or products for testing shall be provided by Saturn Prefab India Pvt. Limited. to the testing agency.

4. Testing Personnel

All testing activities including Ultrasonic Testing, Liquid Penetrant Testing, Magnetic Particle Testing, and Radiography Testing shall be performed by qualified and certified personnel.

The testing personnel shall hold minimum NDT Level II certification in the respective testing methods.

5. Testing Charges

All testing charges for samples/products shall be borne by Saturn Prefab India Pvt. Limited. as per mutually agreed rates between both parties.

6. Validity of MOU

This MOU shall remain valid for a period of Six (6) years, commencing from 01/03/2026 and ending on 29/02/2032, unless extended or terminated by mutual consent of the Parties in writing.
